FUNGI ITALICI

AUTOGRAPHICE DELINEATI

A PROFESSORE

P. A. SACCARDO

Quisque fasciculus constat e 10 foliis, ut *specimen*, continentibus 40 tabulas coloratas, ejusque pretium est ital. Lib. (Francs) 4. Cum tab. nigris ital. Lib. 3. Quotannis saltem fasciculi quatuor prodibunt.

Nei vari anni, dacchè coltivo gli studi micologici, ho avuto la cura, per mio studio, di copiare dal vero quasi tutte le forme di miceti, che mi si presentavano all'osservazione. Ne nacque una collezione di figure colorate, sia dell'insieme che dell'analisi microscopica, di oltre 2000 specie e forme di funghi italiani, ben molte delle quali nuove affatto; collezione che vo di giorno in giorno accrescendo, chè, come ognun sa, siamo ancora ben lontani dall'aver tutta mietuta la enorme messe micologica.

Reputando che la pubblicazione delle ricordate figure possa in qualche modo giovare all'avanzamento della scienza ed agevolare lo studio ai cultori della micologia, io avrei desiderato che tali figure avessero potuto uscire quanto fedelmente naturali nella forma, altrettanto perfette nell'esecuzione artistica. Ma mi sono note le difficoltà d'ordine economico ed esecutivo che attraversano simili pubblicazioni e mi sono note le fini premature di opere analoghe e in Italia e fuori. Debbo dunque limitarmi a delle modeste autografie condotte da me stesso e colorate o meno secondo il desiderio dei sottoscrittori. Dal lato artistico queste tavole lasceranno molto a desiderare; spero tuttavia che raggiungeranno lo scopo, che per la scienza ha primaria importanza, quello cioè di divisare i caratteri più importanti e più idonei alla determinazione pronta e sicura dei generi e delle specie. (*)

Contemporaneamente farò uscire un « *Commentarium Mycologiæ italicæ* » che dal sommo nostro antesignano P. A. MICHEL, intitolero « *Michelia* », nel quale pubblicherò mano a mano diagnosi, osservazioni, elenchi od altro sui funghi italiani.

(*) Le dimensioni dei funghi e delle loro parti, ove non sia altrimenti indicato, sono espresse nelle tavole in micromillimetri (1 microm. = 1/1000 di millimetro). La prima cifra indicherà la lunghezza, la seconda (separata dalla prima con due virgole orizzontali) indicherà la larghezza o grossezza dell'oggetto.

Spero che i Botanici nazionali ed esteri vorranno accordare a queste nuove pubblicazioni quell'appoggio che benevolmente concessero alla mia *Mycotheca Veneta*, la quale, mercè di quello, ha potuto già toccare la sua undicesima Centuria.

PATTI D' ASSOCIAZIONE

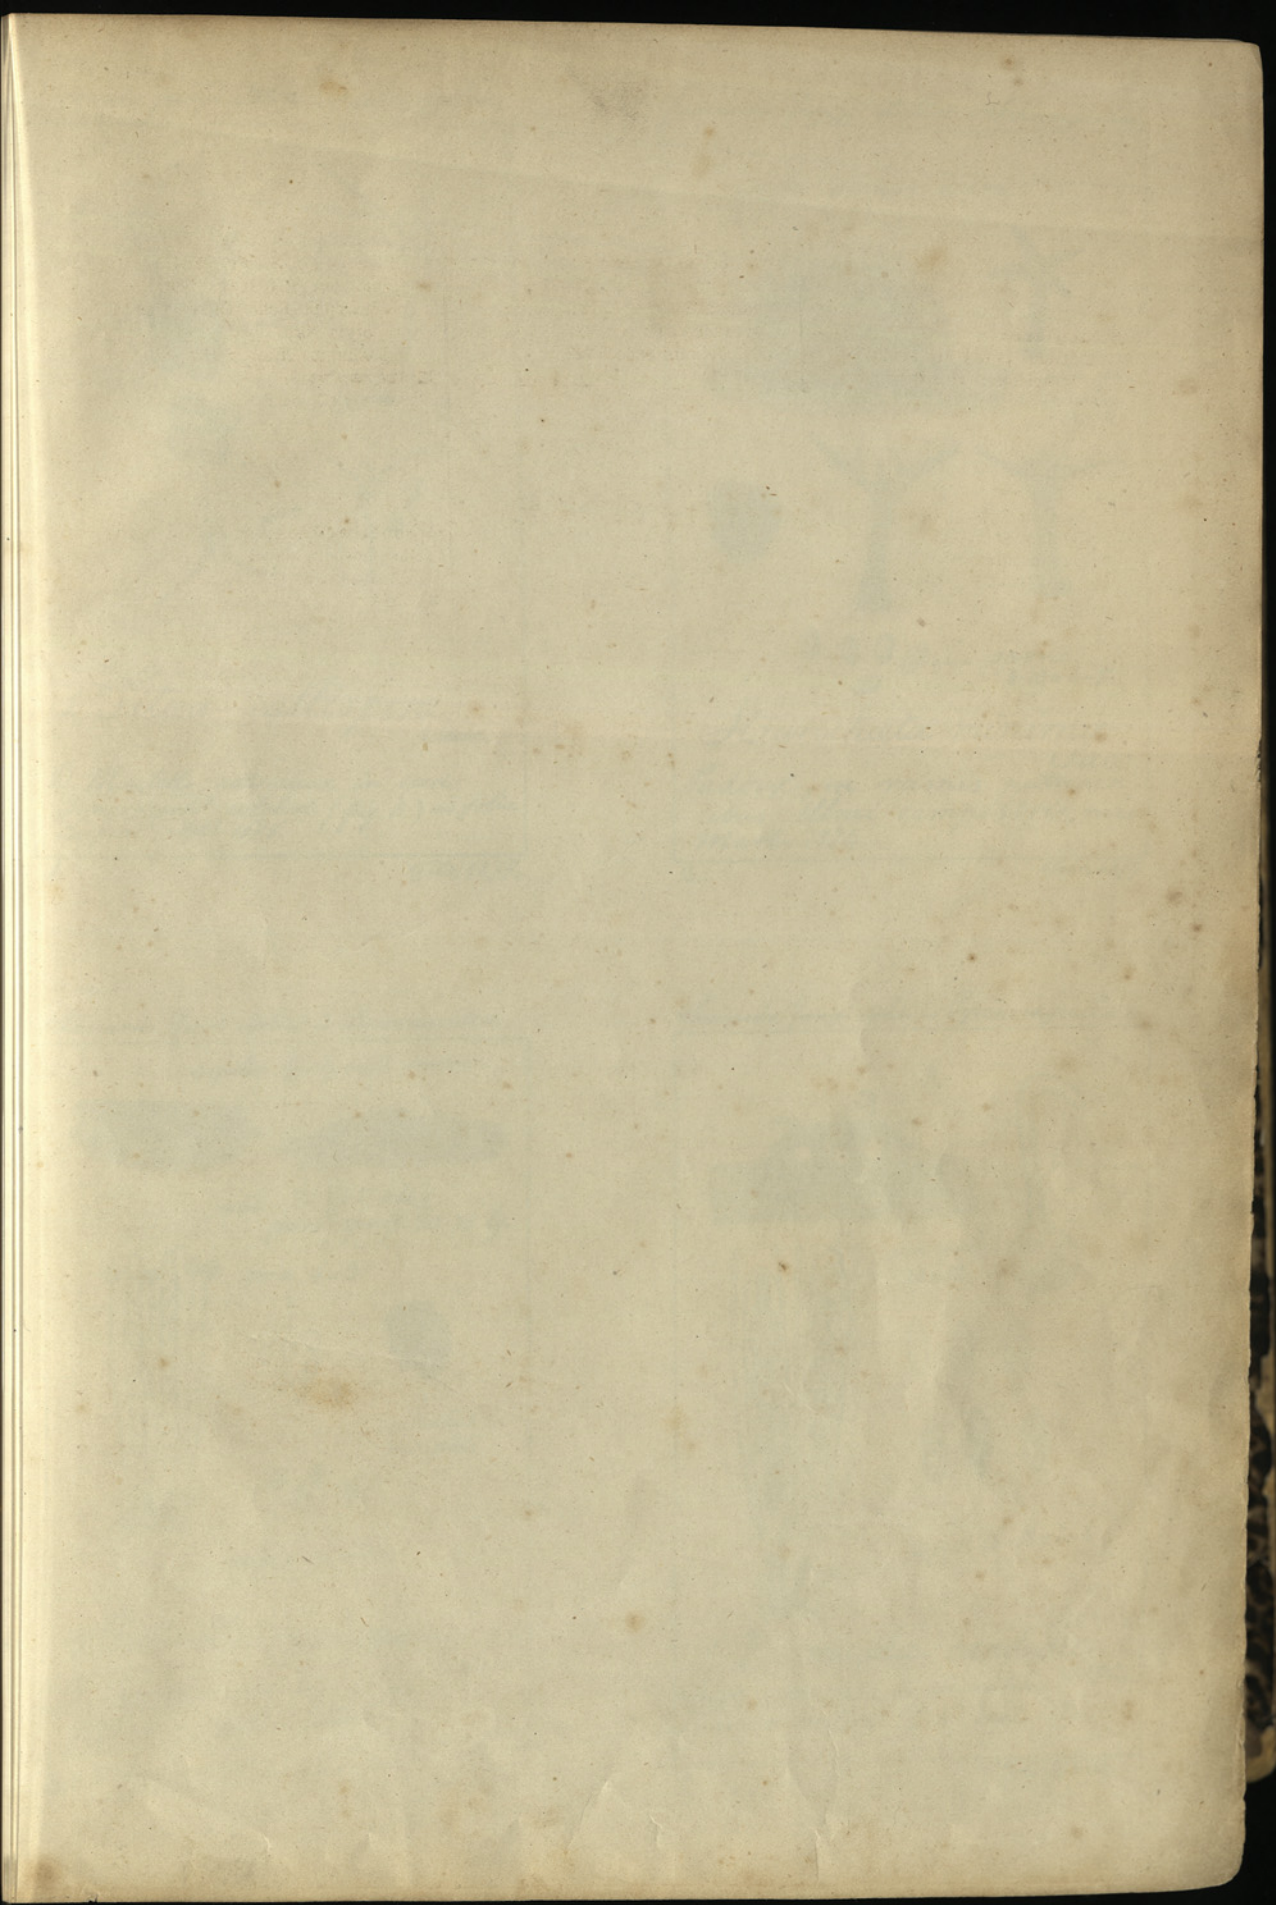

- 1.° L'opera « *Fungi italici autographice delineati* » uscirà in fascicoli di 10 fogli, come l'unito *specimen*, contenenti 40 tavole, le quali potranno dividersi e, con molta utilità degli studiosi, ordinarsi sistematicamente famiglia per famiglia, genere per genere.
- 2.° I generi e le specie nuove di funghi descritte dall'autore, che già ammontano ad oltre 300, saranno delineate fra le prime.
- 3.° Ogni fascicolo con tavole colorate costa, franco a domicilio, Lire italiane o Franchi 4, con tavole in nero L. it. 3.
- 4.° Ogni anno usciranno almeno 4 fascicoli, o ad intervalli o tutti uniti. Ad ogni invio di quattro fascicoli i sottoscrittori sono pregati di spedire direttamente all'autore l'importo dei fascicoli stessi.
- 5.° La pubblicazione « *Michelia, Commentarium Mycologiae italicae* » uscirà ad intervalli diversi, in fascicoli in 8.° gr. al prezzo di L. 1 per ogni foglio di stampa. Ogni fascicolo potrà stare anche da sè, separatamente.

NB. I sig. Botanici che intendono associarsi ai *Fungi italici* sono pregati di conservare l'unita tavola, che forma parte dell'opera: non associandosi, faranno cosa gradita rinviandola all'autore.
